

FORESTRY GRAB BUCKET FGS

Application:

The forestry grab bucket is the ideal tool for handling clippings, brushwood and other coarse materials. Formed like a bucket, the attachment is equally home at digging and grading.

Operating principle:

To withstand the challenging forestry conditions, the forestry grab bucket has massive 15mm sides and thick wear strips on its base. The sturdy and curved tines are operated by powerful rams making efficient use of the available volume and securing the material in the grab. The cutting edges are made from hardened and wear-resistant 450HB steel that guarantees a long lifespan.

The forestry grab bucket is also available with bolted side blades for handling bulk cargo and extra versatility. The welded cutting edge on the base receives extra protection from a second and reversible cutting edge that is bolted in place.

Advantages:

- Heavy-duty build
- Massive 15mm side plates
- Reinforced wear strips
- Curved tines and massive hydraulic cylinders ensure a firm grip of the material

INNOVATION WITH TRADITION FOR LIFE.

Standard specification:

- SWE-EURO or Hauer carriage
- Standard Hauer orange or Hauer matt black paint finish
- Down holders with two hydraulic cylinders
- Teeth are mounted on the sides

Options:

- Multiple mount options
- Pressure relief valve for up to 190bar operating pressures
- Paint finish in all RAL colours
- Bolt-on side plates are available as an option
- Second cutting edge

Technical data:

Width B mm	Volume m ³	Depth T mm	Height H mm	Max. jaw opening W mm	Weight kg
1600	0,90	870	993	1320	444
1800	1,00				474
2000	1,10				494
2200	1,25				514
2400	1,35				554
